Lycophense GS™: An utmost synergistic partnership

Imedeen Time Perfection™ is a formula with scientifically documented ingredients: The Biomarine Complex™, Lycophense GS™ and natural vitamin C from Acerola.

Lycophense GS is a patented, very potent antioxidant complex that consists of two active components: Grape seed extract and tomato extract.

Grape seed extract is a hydrophilic antioxidant, meaning that it works in aqueous environments, such as cell nucleus. Its antioxidant efficacy is 50 times greater than vitamin E, and 20 times greater than vitamin C.

Tomato extract is a lipophilic antioxidant, which means that it is active in lipid ('fatty') environments, such as the cell membranes. It is 100 times as potent as vitamin E, and twice as effective as beta-carotene.

Combined in Lycophense GS, these antioxidants form a synergistic partnership, making their combined antioxidant power far greater than the sum of their effects individually.
